

2027 COHORT

Join a National Effort for Clean Classroom Air

This fall we are inviting a small group of cities to form the first Clean Air Capitals cohort: early leaders who will show the country what clean classroom air looks like. Together, we would aim to have cleaner air in classrooms as school opens in fall 2027.

One national opportunity, many kinds of air

What makes classroom air unhealthy varies across the country. A cohort that spans regions will produce solutions that work in many kinds of places, and every city in it learns from the others. A seat can be one city or a regional cluster of smaller districts sharing capacity.

Regions are illustrative. The drivers shown are common patterns, not a description of any one city.

Why join now

- **A small founding group.** Only ~5 cities/regional clusters will be in the first cohort.
- **A hand in the design.** Founding partners help shape the program, including the timeline, supports, and how the cohort works together.
- **A national stage.** Early cities become the national examples others follow, with a spring 2027 convening and communications support to tell their story.
- **Cleaner air by fall 2027.** Cities that start this fall can have cleaner classroom air in place when school opens in 2027.
